

```

import java.sql.*;

public class Testing1 {

    public static void main(String[] args) {

        try{

            Class.forName("com.mysql.cj.jdbc.Driver"); //Register

            Connection con=DriverManager.getConnection(
                "jdbc:mysql://localhost:3306/test","root","root");

            Statement stmt=con.createStatement();

            ResultSet rs=stmt.executeQuery("select * from student");
            // -----up to this line it contain's one table struc output
            while(rs.next()){

                System.out.println(rs.getInt(1)+" "+
                    rs.getString(2)+" "+rs.getInt(3));

            }

            con.close();

        }

        catch(Exception e){

            System.out.println("Sorry for the inconvenience happened..! "
                + "Check the inputs properly one more time");

        }

    }

}

```

```

show databases;

create database test;

use test;

```

create table student(sid int unique not null, sname varchar(30) not null,smarks int not null);

desc student;

insert into student values(105,'Arthi',92);

select * from student;

SCREENSHOT

The screenshot shows the Eclipse IDE interface. The Package Explorer on the left displays the project structure: JDBCPProject, src, and Testing1.java. The main editor window shows the code for Testing1.java. The code imports java.sql.*, defines a public class Testing1, and implements a main method. The main method attempts to establish a connection to a MySQL database at localhost:3306 using the 'test' database and 'root' credentials. It then creates a Statement object, executes a 'select * from student' query, and iterates through the results using a while loop. The results are printed to the console, showing '105 Arthi 92'. The Console window at the bottom displays the output of the program.

```
1 import java.sql.*;
2
3 public class Testing1 {
4     public static void main(String[] args) {
5         try {
6             Class.forName("com.mysql.cj.jdbc.Driver"); //Register
7
8             Connection con = DriverManager.getConnection(
9                 "jdbc:mysql://localhost:3306/test","root","root");
10
11             Statement stat = con.createStatement();
12
13             ResultSet rs = stat.executeQuery("select * from student");
14             // -----up to this line it contain's one table struc output
15             while(rs.next()) {
16                 System.out.println(rs.getInt(1) + " " +
17                     rs.getString(2) + " " + rs.getInt(3));
18             }
19             con.close();
20         } catch (Exception e) {
21             System.out.println("Sorry for the inconvenience happened..! "
22                 + "Check the inputs properly one more time");
23         }
24     }
25 }
```
